

Admin

1. USER STORY: Admin Login

Card	- As an Admin - I want to log in using my username and password, - So that I can securely access the iSmart admin dashboard to manage system users and roles.
Summary	The system verifies Admin credentials. If correct, the Admin is redirected to the Admin Dashboard.
In-Scope:	- Login UI, authentication, role-based redirection, and session management.
Out of scope	- Social logins (Google, Facebook), 2FA, email verification, auto password reset.
Trigger	Admin clicks the [Login] button on the login page.
Pre-condition	- A default Admin account has been created by the system provider - Admin account exists in the system database
Business rule and error message	- Fields cannot be empty. (Error: "Please fill out this field"). - Credentials must match DB. (Error: "Invalid username or password").
Screen design	
Screen description	Login page for System Administrator including: • username field • password field • reset password link • Login button

	<table><tr><th>Name</th><th>Description</th><th>Type</th><th>Min</th><th>Max</th><th>Maxlength</th><th>Required</th></tr><tr><td>username</td><td>admin login name</td><td>varchar(255)</td><td>3</td><td>30</td><td>30</td><td>yes</td></tr><tr><td>password</td><td>password</td><td>varchar(255)</td><td>6</td><td>50</td><td>50</td><td>yes</td></tr></table>	Name	Description	Type	Min	Max	Maxlength	Required	username	admin login name	varchar(255)	3	30	30	yes	password	password	varchar(255)	6	50	50	yes
Name	Description	Type	Min	Max	Maxlength	Required																
username	admin login name	varchar(255)	3	30	30	yes																
password	password	varchar(255)	6	50	50	yes																
Acceptance Criteria	AC1 – Required Field Validation Given Admin leaves username or password empty When clicking Login Then the system displays validation error as defined in Business Rules AC2 – Credential Verification Given Admin enters username and password When clicking Login Then the system verifies credentials against encrypted data in database AC3 – Successful Login Given Admin enters valid credentials When authentication succeeds Then system redirects to admin home And displays the message: "Login successful. Welcome, Admin." AC4 – Failed Login (Invalid Credentials/ Wrong Role) Given Admin enters incorrect credentials When authentication fails Then system denies access And displays error as defined in Business Rules AC5 – Password Security																					

	Given Admin is entering password Then characters are masked And user can toggle visibility using eye icon AC6 – Session Protection Given Admin has logged out When trying to access admin home Then system redirects to Login page
--	--

2. USER STORY: Admin Create User

Card	- As an Admin - I want to create a new user account and assign a role - So that I can grant system access and control permissions
Summary	Admin creates a new user account by entering required information and assigning a role. The system validates input and stores the user in the database.
In-Scope:	- Input and validate new user credentials (username, password, name, email) and assign a role
Out of scope	- Batch uploading users or exporting user lists.
Trigger	Admin clicks the [Add] button on the User Management screen.
Pre-condition	- Admin is logged in. - System roles (Admin, Staff, Sale) are predefined in the DB.
Business rule and error message	- Username must be unique. (Error: "Username already exists"). - Role must be selected. (Error: "Please select a role"). - Required fields cannot be empty → "Field [Name] is required" - New user status is set to Active by default

Screen design

Screen description

Create User screen includes:

- Username input field
- Full Name input field
- Password input field
- Email input field
- Role dropdown (Staff/Sale)
- Add button

Name	Description	Type	Min	Max	Maxlength	Required
username	Unique login ID	varchar	3	30	30	Yes

	Then system shows error as defined in Business Rules AC5 – Role Selection Required Given Admin does not select a role When clicking Add Then system shows error as defined in Business Rules AC6 – Successful User Creation Given Admin enters valid information When clicking Add Then system creates new user And displays: "User created successfully." AC7 – Default Status Assignment Given a new user is created When saving to database Then system assigns status = Active by default AC8 – Data Persistence Given user is created successfully When returning to User List Then the new user appears with correct information AC9 – Cancel Action Given Admin is creating a user When clicking Cancel Then system returns to User List And no data is saved AC10 – Password Handling Given Admin enters password When submitting the form Then system stores password in encrypted format

Acceptance Criteria	AC1 – Open Edit Form Given Admin is on User Management screen When clicking Edit on a user Then system displays Edit User form with existing data																																																	

	AC2 – Display Existing Data Given Edit form is opened Then all user fields are pre-filled with current information AC3 – Read-only Fields Given Edit form is displayed Then Username and Password fields cannot be edited AC4 – Required Fields Validation Given Admin clears required fields When clicking Save Then system shows error as defined in Business Rules AC5 – Role Validation Given Admin does not select a role When clicking Save Then system shows error as defined in Business Rules AC6 – Successful Update Given Admin enters valid information When clicking Save Then system updates user successfully And displays: "User updated successfully." AC7 – Cancel Action Given Admin is editing a user When clicking Cancel Then system returns to User List And no changes are saved
--	--

5. USER STORY: Admin Delete User

Card	- As an Admin - I want to delete a user account - So that I can remove unused or invalid accounts from the system.
Summary	Admin deletes an existing user account from the system. The system requires confirmation before deletion and ensures that restricted actions are prevented.
In-Scope:	- Permanently delete a user account from the database with confirmation.
Out of scope	- Batch delete or restore deleted users.
Trigger	Admin clicks (i) "Delete" button on a user row
Pre-condition	- Admin is logged in. - User exists in the system
Business rule and error message	- System must confirm before deletion Error: "You are definitely delete this account?" - System must remove user from database. Error: "Unable to delete user".

Screen design

Screen description

Edit User screen allows Admin to delete user information.

The screen includes:

- User table with list of users
- (i) Delete button on each row
- Confirmation popup with:
 - Yes button
 - Cancel button

Name	Description	Type	Min	Max	Maxlength	Required
delete	Delete user button	type	-	-	-	Yes

	Given a user is deleted When refreshing or reloading the list Then the deleted user no longer appears AC7 – System Error Handling Given system fails to delete user When performing deletion Then system shows error as defined in Business Rules AC8 – Access Restriction After Deletion Given a user account has been deleted When that user attempts to log in Then system denies access
--	--

6. USER STORY: Admin Reset User Password

Card	- As an Admin - I want to manually reset a user's password and generate a temporary one - So that I can provide it to users who have lost access.
Summary	Admin views password reset requests from users and resets their password. The system generates a temporary password and displays it for the Admin to share with the user manually.
In-Scope:	- Generate and display a temporary password for Admin to share manually.
Out of scope	- Automated email delivery, OTP, or security questions.
Trigger	Admin clicks the [Reset Password] notification for a specific user request.
Pre-condition	- Admin is logged in

	- At least one reset request exists. - Target user account exists
Business rule and error message	- Temp password must be 8-12 alphanumeric characters. - Admin must confirm reset action "Confirm reset for [Username]?" - System must update password immediately

Screen design

Screen description

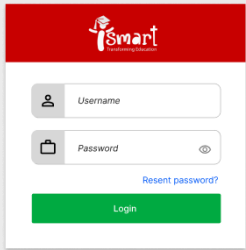

Reset Password screen allows Admin to handle user reset requests. The screen includes:

</

	Given confirmation dialog is shown When Admin clicks Cancel Then system closes dialog And no action is performed AC6 – Generate Temporary Password Given reset is confirmed When system processes request Then a random 8–12 character password is generated AC7 – Display and Copy Password Given password is generated Then system displays it in popup And provides Copy button AC8 – Update Password Immediately Given reset is completed When system updates database Then old password is replaced And user is forced to log out
--	--

Users

1. USER STORY: User (Staff, Sale) Login

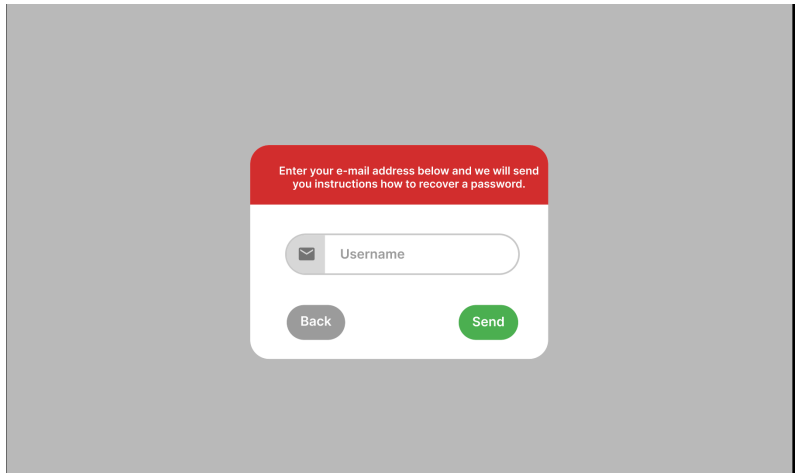

Card	- As a Staff or Sale user - I want to log in using my username and password - So that I can access the system according to my role
Summary	The system authenticates user credentials and redirects them to the appropriate interface based on their role.
In-Scope:	- Login UI, authentication, role-based redirection, and session management.
Out of scope	- Social logins, 2FA, auto password reset.
Trigger	User clicks the [Login] button on the login page.
Pre-condition	- User account exists in the system
Business rule and error message	- Fields cannot be submitted empty. (Error: "Field [Name] is required"). - Credentials must be valid (Error: "Invalid username or password"). - Staff role is restricted to Staff home, Sale role is restricted to Sale home.
Screen design	 A mockup of a login page for a system called 'iSmart'. The page has a red header with the 'iSmart' logo. Below the header is a white login form with a red border. The form contains a 'Username' input field with a person icon, a 'Password' input field with a lock icon, a 'Resent password?' link, and a green 'Login' button.
Screen description	Login page for system users including: - Username input field - Password input field (masked with toggle visibility icon)

	- Login button - Reset Password link <table><tr><th>Name</th><th>Description</th><th>Type</th><th>Min</th><th>Max</th><th>Max length</th><th>Required</th></tr><tr><td>username</td><td>User login name</td><td>varchar</td><td>3</td><td>30</td><td>30</td><td>yes</td></tr><tr><td>password</td><td>User password</td><td>password</td><td>6</td><td>50</td><td></td><td>Yes</td></tr></table>	Name	Description	Type	Min	Max	Max length	Required	username	User login name	varchar	3	30	30	yes	password	User password	password	6	50		Yes
Name	Description	Type	Min	Max	Max length	Required																
username	User login name	varchar	3	30	30	yes																
password	User password	password	6	50		Yes																
Acceptance Criteria	AC1 – Required Username Given User leaves username empty When clicking Login Then system shows error as defined in Business Rules AC2 – Required Password Given User leaves password empty When clicking Login Then system shows error as defined in Business Rules AC3 – Credential Verification Given User enters username and password When clicking Login Then system verifies credentials against database AC4 – Successful Login Given User enters valid credentials When authentication succeeds Then system redirects user based on role as defined in Business Rule. AC5 – Failed Login Given User enters invalid credentials When authentication fails																					

	Then system denies access And shows error as defined in Business Rules AC6 – Password Security Given User enters password Then characters are masked And visibility can be toggled AC7 – Session Protection Given User has logged out When accessing protected pages Then system redirects to Login page AC8 – Session Expired Given User session expires When performing any action Then system redirects to Login And shows error as defined in Business Rules Then system denies access
--	---

2. USER STORY: User Forgot Password Request

Card	- As a Staff or Sale user - I want to submit a reset request with my username - So that the Admin is notified to provide me with a new password.
Summary	User submits a password reset request by entering their username. The system records the request for Admin to process.
In-Scope:	- Submit a password reset request to the Admin via username validation.
Out of scope	- OTP verification, or email notifications.

Trigger	User clicks the "Reset Password?" link on the login page.														
Pre-condition	- User account exists in the system														
Business rule and error message	- The username can not be empty and must exist in the system. (Error: "Invalid username"). - Duplicate request is not allowed (if pending). Error: "Request already submitted"														
Screen design															
Screen description	Reset Password Request screen allows user to submit a request. - The screen includes: - Username input field - Send button - Back to Login button - <table><thead><tr><th>Name</th><th>Description</th><th>Type</th><th>Min</th><th>Max</th><th>Max length</th><th>Required</th></tr></thead><tbody><tr><td>username</td><td>User login name</td><td>varchar</td><td>3</td><td>30</td><td>30</td><td>yes</td></tr></tbody></table>	Name	Description	Type	Min	Max	Max length	Required	username	User login name	varchar	3	30	30	yes
Name	Description	Type	Min	Max	Max length	Required									
username	User login name	varchar	3	30	30	yes									
Acceptance Criteria	AC1 – Open Request Screen Given User is on Login page When clicking “Reset Password” Then system navigates to Reset Request screen														

AC2 – Required Username

Given User leaves username empty
When clicking Submit
Then system shows error as defined in Business Rules

AC3 – Username Validation

Given User enters a username
When clicking Send
Then system checks if username exists

AC4 – Invalid Username

Given username does not exist
When sending request
Then system shows error as defined in Business Rules

AC5 – Duplicate Request Prevention

Given a reset request for the same user is already pending
When submitting another request
Then system shows error as defined in Business Rules

AC6 – Successful Request Submission

Given username is valid and no pending request exists
When clicking Submit
Then system stores reset request
And displays: "Request submitted successfully."

AC7 – Navigation Back to Login

Given User is on Reset Request screen
When clicking "Back to Login"
Then system redirects to Login page
